Introduction

Incident Documentation establishes an organized method for documentation, communication, and monitoring on all incidents connected to security. Incidents will be documented, reported, and analyzed to have actions established within the company for fulfilling legal, regulatory, and internal security needs. This would serve the objective of minimizing the effect of occurrences, promoting transparency, and driving continual improvement in incident management.

Roles and Responsibilities

Roles	Responsibilities
Project manager	Ensure the ISMS aligns with business objectives and complies with legal/regulatory requirements.
	Approve risk management policies and provide oversight on risk treatment decisions.
Human Resources Manager	Manage personnel security risks, including employee background checks and access control for sensitive data.
	Ensure employees receive adequate security awareness training.
Incident Response Team	Coordinate responses to security incidents and ensure appropriate measures are taken to contain and mitigate risks.
	post-incident reviews and update

Procedure Steps

Details	Information
Incident ID	Unique identifier for tracking.
Date & Time of Incident	When the incident occurred and was detected.
Affected Systems & Data	List of systems/data impacted by the incident.
Impact Assessment	Business impact evaluation.
Root Cause Analysis	Identify the cause of the incident.
Response Actions	Mitigation and resolution actions taken.
Lessons Learned	Recommendations for future improvement.

Security Controls

The controls used to safeguard the confidentiality and integrity of incident documentation are described in this section. It focuses on document encryption for security and access control, making sure that only authorized individuals may read sensitive information. One of the controls is the logging of incident reporting-related activities.

Control	Details
Access Control	Incident documentation restricted to authorized personnel.
Logging	Maintain logs of all incident reporting activities.

Monitoring and Auditing

The topic illustrates how follow-up activities and ongoing monitoring of new occurrences ensure that everything is fulfilled. To keep the process in accordance with internal policy and legal requirements, periodic audits are required.

Task	Details
Continuous Monitoring	Regular monitoring of systems to detect further incidents.
Reviewing	Ensure follow-up actions from incident reports are completed.
Auditing	Conduct regular audits to ensure procedural compliance.
