

introduction

The Asset Registry is [Company Name]'s comprehensive database of all important information supporting information security management and adhering to ISO 27001 standards. In order to achieve a classification of assets, an asset registry is necessary.

purpose

- make sure all assets are listed clearly with necessary information such as location, owner, and value
- encourage asset classification based security measures
- tracking lifecycle of the purchases to disposal for safety
- help with risk assessment by identifying critical assets of the organization and enhancing security

Asset ID	Asset Type	Description
1	Company Laptops	Laptops used by employees across departments
2	Employee Management System	System managing employee records and data
3	Corporate Email System	Email system used for corporate communications
4	Company Personnel	Personal data of company employees
